1. Operation

1. ON/OFF

Hold button long to turn on the power, and hold long for a second time to turn off the power. When the motor stops driving and when the e-bike is not used for a consecutive 5 minutes, it will automatically shut down and turn off the motor power supply.

2. Display 1

Hold button to start up and enter display.

2.1 Turn on backlight and headlights

Hold long to turn on backlight and headlights (the controller should have headlight drive output function); hold long again to turn off the backlight and headlights.

2.2 Assist ratio gear (ASSIST) switch

Press or to switch 1-5 file gear. Gear 1 is for the minimum power, gear 5 is for the highest power. Each startup will automatically restore the gear shutdown last time (the user can set randomly). Gear 0 is without booster function.

2.3 6Km/H assist promotion function

Hold and flashes, the vehicle drives at the speed not more than 6Km/h. Release button, the function is invalid.

2.4 Display and delete of single data

After power on for 5 seconds, hold and at the same time, single trip riding time (TM) and single trip distance (DST) flash, hold button shortly, the content of both is cleared. If failed holding the button within 5 seconds, it will automatically return the display interface after 5 seconds, original content is preserved.

3. Display 2

Press button in display 1 to enter display 2.

In the riding mode after 5 seconds, display 2 automatically returns to display 1, and the original motor power (MOTOR W) display is replaced with motor operating temperature display (MOTOR ℃) display (the internal motor should be equipped with the temperature sensor and the output of temperature detection signal).

4. Display 3

Press button in display 2 to enter display 3.

In the riding condition, five seconds later, a single maximum speed (MXS) display automatically returns to the real riding speed (Km/H).

5. In display 3, hold button shortly (SW), and the display will re-enter display 1.
6. Hold button to turn off the display and the power supply of controller.

7. Automatically prompt interface

7.1 Error Code Display
1. Motor position sensor fault!
2. THROTTLE fault!
3. Motor or controller short circuit fault!

Electronic control system failure will display (flashing) fault code. Once the fault was removed, it automatically exits from the fault code display interface.

7.2 Motor temperature alarm
When the motor temperature (the internal motor should be equipped with the temperature sensor and the output of temperature detection signal) is over the warning value, MOTOR °C (°F) flashes to alarm at any display, meanwhile the motor controller will offer the appropriate protection to motor.

General Project Setting

1. Set maximum riding speed
Within 5 seconds after power on, hold and at the same time to enter General Setting interface, the first is maximum speed setting, press button maximum riding speed flash, press or to set the maximum riding speed (default 25Km/H). Press button Maximum riding speed stop flashing, then press to enter the next parameter settings.

2. Wheel diameter setting
Set wheel diameter after Maximum speed setting is finished, press button wheel diameter flashes. press or to set the specifications of wheel diameter. Select the range 6,8,10,12,14,16,18,20,22,24,26,700c,28 and 29 inches. Press button wheel diameter stop flashing, then press to go to the next parameter settings.

3. Set the metric units
Set metric units after finishing wheel diameter setting, press UNT flash. press or to select the three metric units of speed, mileage, and ambient temperature in synchronization.

<table>
<thead>
<tr>
<th>Code</th>
<th>Speed</th>
<th>Mileage</th>
<th>Temperature</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Km/h</td>
<td>KM</td>
<td>°C</td>
</tr>
<tr>
<td>1</td>
<td>MPH</td>
<td>Mil</td>
<td>°C</td>
</tr>
<tr>
<td>2</td>
<td>Km/h</td>
<td>KM</td>
<td>°F</td>
</tr>
<tr>
<td>3</td>
<td>MPH</td>
<td>Mil</td>
<td>°F</td>
</tr>
</tbody>
</table>

4. UNT stop flash after metric unit setting is completed. Holding button again to exit from setting environment of routine projects and save the setting values, returning to display 1.

5. Exit from routine project setting
All three routine project settings can exit from the setting environment and return to the display by holding button long after each setting is completed, meanwhile the setting values are saved.

Under each setting interface, if the button failed holding for more than 1 minute, it will automatically return to display 1, and the setting value is invalid.
